Research Interests

My research focuses on developing robust computer vision and machine learning models for
understanding human behavior in complex, real-world environments. I specialize in leveraging
multimodal data and sequence modeling to address challenges in automotive and human-computer
interaction domains. My work also explores advanced deep learning techniques, such as
cross-domain adaptation, to enhance model performance in challenging conditions like tiny object
detection and tracking.

- Computer Vision for Human Behavior Understanding
- Multimodal Learning & Emotion Recognition
- Sequence Modeling (RNNs, Transformers) for Activity Recognition
- Object Detection, Tracking, and Cross-Domain Adaptation
- Applications in Automotive AI & In-Vehicle Monitoring Systems
